

Make Every Kilowatt Count

Energy Management Platform for Industry 4.0

GridOnCloud™ Energy Management System (EMS) is designed specifically for industrial manufacturing, providing real-time visibility into energy consumption, equipment performance, and operational efficiency—all from a powerful web dashboard and a mobile-friendly interface.

Key Features

-  Monitor energy usage across multiple plants and production lines
-  Track electricity, diesel & solar consumption/generation in real-time
-  Customizable Dashboards & Live SLD for continuous tracking
-  Receive instant alerts for abnormal energy usage and equipment issues
-  Analyze trends with interactive dashboards and detailed reports
-  Support sustainability, ESG, and energy efficiency initiatives
-  Access critical information anytime, anywhere from desktop or mobile

Optimize performance, Improve decision-making, and Drive growth

MEASURE

Gain comprehensive visibility of all your energy assets, from a birds-eye view of your entire operation to individual parameters of a single device in your system.

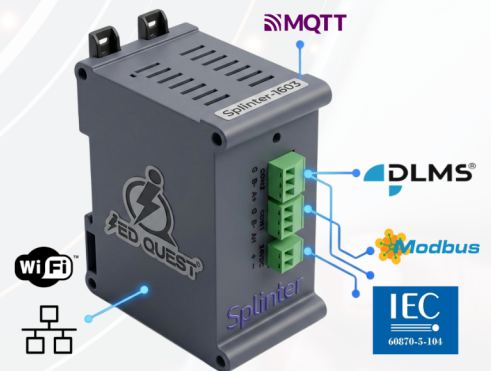

ANALYSE

Customised and automated reports with real-time alerts help you prioritise your time and attention on the numbers that matter the most to your business.

CONTROL

Tight hardware and power management software integration enables you to react rapidly to escalations, saving your precious time.

ALERTS

Stay ahead of critical events with a powerful and customizable alarm management system designed for industrial operations. Whatsapp, Email & Moile App
